Отчет по боту телеграма

1. адрес Cloud Function и скриншот кода функции

   https://functions.yandexcloud.net/d4e8a2us0u6bvadf7r29

```python
import telebot
import requests
import json
API_TOKEN = '7218834892:AAEy4b0aZuxBNfjJLArIg-XAKCskAxhmFwc'
bot = telebot.TeleBot(API_TOKEN)
def translate(text):
    headers = {
        "Content-Type": "application/json"
    }
    body = {
        'q': text,
        'source': "auto",
        'target': "en",
        'format': "text",
    }
    req = requests.post('https://translate.flossboxin.org.in/translate', headers=headers, data=json.dumps(body))
    trans_text = req.json()
    return trans_text['translatedText']
@bot.message_handler(commands=['start'])
def send_welcome(message):
    bot.reply_to(message, """\
Hi there, I am Transator Bot.If I am here you're in big trouble. Say anything (if you date) and I'll translate it!\
""")
@bot.message_handler(commands=['help'])
def send_help(message):
    bot.reply_to(message, """\
There will be no help! GIVE ME DA WORDS TO TRANSLATE!\
""")
@bot.message_handler(func=lambda message: True)
def echo_message(message):
    bot.reply_to(message, translate(message.text))
def handler(event, context):
    try:
        event_body = json.loads(event['body'])
        message = telebot.types.Update.de_json(json.dumps(event_body))
        bot.process_new_updates([message])
        return {
            'statusCode': 200,
            'body': 'OK',
        }
    except Exception as e:
        print(f"Ошибка: {e}")
        return {
            'statusCode': 500,
            'body': f"Ошибка: {str(e)}",
```
